

ASUC*plus* - Subsidence Repair Techniques and Engineered Foundation Solutions

PRESS RELEASE:

ASUCplus JOINS SPECIALIST CONTRACTORS GROUP – THE NSCC

ASUCplus has been accepted as a member of the leading specialist construction industry body the National Specialist Contractors Council (NSCC). Members of ASUCplus offer an extended range of foundation solutions, including new build, basements and other forms of subsidence repairs.

All specialist contractors in organisations belonging to NSCC must meet agreed minimum standards of competence and be committed to operating within a code of conduct which covers health and safety, training, insurance and trading record. They also need to collate accident information and operate a formal complaints procedure. Members of ASUCplus are already required to pass stringent vetting procedures as part of the membership procedure and are delighted to have this recognised by the NSCC.

Since its inception ASUCplus has taken a pro-active stance on improving standards within the industry, through training, innovation and continuous monitoring of its membership and for this reason is able to offer its unique, transferable, 12-year insurance back guarantee on the work of its members.

ASUCplus shares the aims of NSCC which include promoting the use of specialist contractors who belong to a reputable trade body. In difficult trading conditions the security that comes from using a professional, fully-vetted, company are more important than ever.

Full information on members and the work they carry out, including a search facility by location and contract type, is available at the website www.asuc.org.uk.

WORDS: 232

Notes to editors: ASUCplus is the only association representing specialist contractors in subsidence repair techniques and engineered foundation solutions. The latent defects insurance covers all the works carried out under contract at a property - not just the subsidence repair. Members of ASUCplus offer an extended range of foundation solutions, including new build, basements and other forms of subsidence repairs.
