

PRESS RELEASE

BASEMENT SEMINAR A SUCCESS FOR ASUC

Over 150 delegates attended the ASUCplus seminar on Basement Construction and Design in London recently. The event attracted an audience from all interested sectors of the industry, including architects, contractors, building control, suppliers, chartered surveyors, lawyers, interior designers and civil/structural engineers.

The event took listeners clearly through the practicalities of creating a basement: both legal and technical, the value and benefits, as well as innovative solutions and creative possibilities. With speakers drawn from many disciplines, including building control and surveying; construction and waterproofing, design and final fit-out; as well as estate agency, it was clear that good planning and design were essential to ensure maximum benefit could be derived from the investment.

Speaking afterwards, the Seminar Chairman, Roger Boddy, said “We were delighted with the success of this event, ASUCplus has really raised awareness of the benefits of good, professional basement construction,” adding: “feedback from the event has been very positive from both delegates and exhibitors, who reported brisk business and interest in their products and services.”

The presentations were particularly valuable to anyone considering or planning a basement as they set out a route to a successful and ultimately useful basement construction. Many of the presentations include images of innovative basements to inspire anyone considering making the investment and copies are available to download from the website at www.asuc.org.uk.

Notes to editors: ASUCplus is the only association representing specialist contractors in subsidence repair techniques and engineered foundation solutions. The latent defects insurance can cover all the works carried out under contract at a property - not just the subsidence repair. Members of ASUCplus offer an extended range of foundation solutions, including new build, basements and other forms of subsidence repairs.
